

What is choice?

Choice involves three steps: 1) presenting a child with two or more options, 2) allowing the child to make a selection, and 3) providing the child with the option selected.

How does choice support distance learning?

Choice provides access to preferred activities or tasks. Additionally, choice empowers children with a voice during the transition to distance learning.

How do I use choice?

1. Embed Choice

Incorporate choice making opportunities into the distance learning activities provided by your child's teacher or school.

2. Make a List

Scan through the distance learning activities in advance to develop a list of predetermined choices. Be sure you are comfortable with your child selecting either choice option.

3. Consider Within-Activity Choices

When providing a within-activity choice, the activity itself remains the same. Instead, your child makes a choice about instructional materials and/or environmental arrangements.

who to work with

what order to complete tasks

what materials to use

where to work

4. Consider Across-Activity Choices

An across-activity choice allows your child to select between different activities.

Tic-Tac-Toe Board: Fill in each square with a different distance learning activity. Let your child choose which three activities to complete to achieve a tic-tac-toe.

5. Start Small

Provide choices along a continuum. Initially, present your child with simple and concrete choices. Gradually expand and intertwine choice-making opportunities (e.g., choice of activity and choice of working independently or with an older sibling).

6. Follow Through

Maintain predictability by reliably honoring your child's choice options.
